15. SUPPLEMENTARY NOTES

16. ABSTRACT

This report provides data on the use of sanitary landfills (Subtitle D facilities) for hazardous waste disposal in Florida by small quantity generators. It consists of eleven parts including a part called Study Area Data which contains the data aggregated across the counties covered in the report, and ten parts containing data at the individual county level for all 67 counties in Florida. Each county is described in terms of location, economic profile, and demographic characteristics. In addition, information is provided on permitted sanitary landfills that are currently active in Florida. This report contains survey data from approximately 19,000 hazardous waste generators that reside in 514 industries identified by four-digit Standard Industrial Classifications codes. The hazardous waste data are cross-tabulated and displayed in the following seven configurations: types of waste generated (26 types); management methods used (14 methods); types of wastes disposed in sanitary landfills; SIC generating waste; types of waste generated by SIC; management methods used by SIC; and waste types by SIC by management method. The last cross-tabulation consists of 14 sub cross-tabulations, i.e., one for each management method. There are identical sets of crosscounty data (i.e., each county has a set of 7 cross-tabulated tables.)

It has been subject to the Agency's peer and administrative review and it has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

FOREWORD

This research was conducted in order to provide information to the U.S. Environmental Protection Agency that relates to the use of RCRA Subtitle D facilities by small quantity generators of hazardous waste. One area of concern that relates to RCRA Subtitle D facilities is the effectiveness of monitoring programs at these facilities. An important component in assessing monitoring programs at RCRA Subtitle D facilities is the data on the composition of wastes managed at these facilities. The purpose of this report is to provide to the EPA data on small quantity generator hazardous waste that is managed at RCRA Subtitle D facilities in the State of Florida, with a particular emphasis on sanitary landfills.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for those counties included in each of the first ten parts of the report. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The specific counties that are included in Parts I-X of the report are the following:

Part I:	Alachua, Baker, Bay, Bradford, Brevard
Part II:	Broward, Calhoun, Charlotte, Citrus, Clay, Collier
Part III:	Columbia, Dade, De Soto, Dixie, Duval
Part IV:	Escambia, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Hernando, Highlands
Part V:	Hillsborough, Holmes, Indian River, Jackson, Jefferson, Lafayette
Part VI:	Lake, Lee, Leon, Levy, Liberty, Madison, Manatee, Marion
Part VII:	Martin, Monroe, Nassau, Okaloosa, Okeechobee, Orange
Part VIII:	Osceola, Palm Beach, Pasco, Pinellas
Part IX:	Polk, Putnam, St. Johns, St. Lucie, Santa Rosa, Sarasota, Seminole
Part X:	Sumter, Suwanee, Taylor, Union, Volusia, Wakulla, Walton, Washington

ABSTRACT

This report contains data from all of the 67 counties in the State of Florida, and from over 19,000 small quantity hazardous waste generators. Most of the firms and agencies providing hazardous waste data included in this report are small quantity hazardous waste generators as defined in the RCRA regulations. These data are displayed according to 26 waste types, 14 waste management methods and 514 industries as defined by four-digit Standard Industrial Classification codes. This report contains individual county data for each of the 67 counties in the State of Florida summarized and presented by these waste types, waste management methods, and Standard Industrial Classification codes. This report also contains statewide data aggregated across all of the 67 counties in the State of Florida by these waste types, waste management methods, and Standard Industrial Classification codes.

These data indicate that there are approximately 129,000 tons of small quantity generator hazardous waste produced annually in the State of Florida. Approximately 35 percent of these wastes are recycled, while approximately 23 percent of these wastes are disposed in sanitary landfills in the State of Florida.

In terms of weight, the major types of waste disposed in sanitary landfills are "Waste Oils, Lubricants" (45 percent), "Lead-Acid Batteries" (12 percent), "Spent Solvents" (11 percent), and "Sludges with Heavy Metals" (5 percent). Even though waste oils are not regulated as a hazardous waste under the RCRA, they were included in the county-level surveys conducted in the State of Florida.

Counties in the State of Florida are relatively diverse in terms of geography, population size and growth, and economic activities. As such, these Florida data on small quantity generator hazardous waste are generally representative of the types and quantities of these wastes produced, and the management practices used, nationwide by small quantity hazardous waste generators.

SECTION 1

INTRODUCTION

The 1984 Hazardous and Solid Waste Amendments to RCRA require the U.S. Environmental Protection Agency (EPA) to complete a study of the adequacy of the current Subtitle D programs in the States and to report to Congress within 36 months of enactment of the amendments. The study is to evaluate the current criteria regarding protection of public health and the environment from problems associated with groundwater contamination. The study is to include a detailed assessment of the adequacy of groundwater monitoring programs at Subtitle D facilities, as well as a recommendation to Congress concerning what enforcement authorities are needed to properly implement the program.

After completion of this study, the EPA is to revise, where necessary, the criteria for facilities that receive household and small quantity generator hazardous waste. The revisions are to include all steps necessary to protect human health and the environment. The amendments specify that, at a minimum, the revisions should require groundwater monitoring as necessary to detect contamination. Information on the types and quantities of hazardous waste typically entering the Subtitle D facilities is important in order to properly design monitoring systems to detect contamination. The 1984 RCRA amendments require the states to adopt and implement Subtitle D permitting programs that are to be approved by the EPA, or that are equivalent or similar to the federal program as defined by current or revised criteria.

An important component in assessing groundwater monitoring programs at Subtitle D facilities is the acquisition of data on the composition of wastes managed at these facilities. The purpose of this report is to provide the EPA with data on potentially hazardous waste generated and managed in the State of Florida, as well as with information on sanitary landfills in Florida. The sanitary landfills described in the study are those that reside in the counties that have provided the hazardous waste generation and management data.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for all 67 counties in the State of Florida and, as a result, cover the hazardous waste management activities of small quantity generators for the entire State of Florida. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The counties are listed in alphabetical sequence within each of the first ten parts of the report. The specific counties that are included in each part of the county data (Parts I-X) are specified in the Foreword (p. iii).

SECTION 2

METHODOLOGY AND STUDY AREA

METHODOLOGY

The data contained in this report on hazardous waste generation and management, and sanitary landfills were acquired from the Florida Department of Environmental Regulation (FDER). The hazardous waste data were collected as part of a statewide local government hazardous waste assessment program administered by the FDER. These data have been compiled to assist the EPA in evaluating facilities (sanitary landfills) regulated under Subtitle D of the RCRA so that appropriate groundwater monitoring programs can be established at these facilities. The data contained in this report will assist the EPA in defining the problems associated with hazardous waste disposal in sanitary landfills and with other management methods used by small quantity generators of hazardous waste. In addition, these data can provide information that the agency can use in determining the regulatory status of waste oil in the context of the RCRA concerns.

The data are presented in tabular form by amount, type, waste management method, and Standard Industrial Classification (SIC) code. Waste amounts are in units of pounds for the county data (Parts I-X) and in units of tons for the study area aggregated data (Part XI). There are (26) waste types and (14) waste management methods into which the data are arranged. In addition, there are 514 four-digit Standard Industrial Classification codes into which the data have been cross-tabulated and arranged.

It should be noted that an initial list of approximately 400 SIC codes was prepared by the FDER, and this list was used by the counties in identifying potential generators of hazardous waste. The number of SIC codes for which data are presented in this report reflects the SIC codes actually reported by the potential generators responding to the survey. Some survey respondents, for example, changed the SIC code on the survey form sent to them, to an SIC code that more closely reflected the primary activity of the firm as judged by the respondent. The changing of SIC codes by survey respondents resulted in SIC codes that are not on the initial FDER list, but are, nevertheless, contained in this report. As a result, the total number of SIC codes for which data are presented in this report is 514.

The county level data were provided by the FDER and merged into a single data file for computer manipulation. Due to the decentralized way that the data were collected, keypunched, and coded, some deficiencies exist in the data and should be noted. First, Bay, Broward, Dade, Escambia, Monroe, Okaloosa, Santa Rosa, and Walton counties utilized a waste management category called "Picked Up by a Private Hauler." When these data were processed by the counties, they were coded into the category "City, County, or Private Hauler Takes Waste to the Landfill." Although unknown, it may be that some of these wastes were recycled or managed in ways other than disposal in sanitary landfills. A significant amount of these wastes are waste oils, lead-acid batteries, spent solvents, and empty pesticide containers. This coding procedure over-estimates the amount of waste managed at sanitary landfills in these counties.

Second, De Soto, Hardee, Highlands, Okeechobee, and Polk counties also utilized a waste management category on their survey form called "Picked Up by a Private Hauler." However, in this case, these counties did not specify where this material was taken for ultimate management, whereas, in the previous case, it was assumed that all waste that was reported picked up by a private hauler was, in turn, taken to a sanitary landfill. Wastes reported managed in this category for these counties have been consolidated into the waste management category "Other" in this report. Much of the wastes reported managed by this method are wastes that typically have secondary market value (e.g., waste oils, lead-acid batteries, spent solvents, and empty pesticide containers). It is likely that some of these waste were ultimately recycled. It is not possible to determine the ultimate management fate of wastes reported in this category on the survey forms. The use of the category "Picked Up by a Private Hauler" under-estimates the amounts and types of waste managed at sanitary landfills for these counties.

Upon examining the data in terms of the waste types generated by Standard Industrial Classification (SIC) codes, some anomalies have been identified. These anomalies relate to the reported generation of, for example, dry cleaning filters, waste explosives, and photographic wastes by industries that typically would not generate these types of wastes (e.g., Plumbing, Heating and Electrical Establishments, Gasoline Service Stations, Boat Building and Repair Shops, Trucking Companies, General Automotive Repair Shops, Reupholstery and Furniture Repair Shops, Motor Vehicle Dealers and Automobile and Home Supply Stores). The presence of these anomalies in the data does not significantly affect the overall distributions of waste types generated or waste management methods reported used by generators participating in the assessments. As with any large, decentralized data base, it is anticipated that errors relating to respondent accuracy, coding and keypunching have occurred.

The data relating to sanitary landfills in the study area were obtained from the FDER. The FDER maintains a data file on all sanitary landfills in the State of Florida. The data in the FDER file are for all classes of landfills, and for landfills that are closed, inactive, or active. The data presented in this report are only for landfills that are in use (i.e., permit status: active) and of Class I, II, or III.

Sanitary landfill facility classes are defined by the FDER as follows:

Class I Landfill	Landfill receiving some putrescible waste or garbage with total disposal in excess of 20 tons or 50 cubic yards (compacted) per day. Daily cover is required.
Class II Landfill	Landfill receiving some putrescible waste or garbage with total disposal of less than 20 tons or 50 cubic yards per day. Minimum cover is once every four days.

Class III Landfill	Landfill receiving only non-putrescible waste (i.e., trash, demolition and construction debris, yard trash, etc.). Minimum cover requirement is once per week.

The data file maintained by the FDER consists primarily of information contained in the facility permit, as well as a historical log of permit activities, including operational deficiencies at the facility. Printouts of each of the 160 active sanitary landfills that are in the 67 counties in the State of Florida are contained in Appendix D of Part XI of the report (Study Area Data), and definitions of the facility profile codes used in the FDER printouts are contained in Appendix E of Part XI of the report (Study Area Data).

In the appendices of Parts I-X of the report (County Data), there are displays that contain 21 summary characteristics for each active sanitary landfill in the State of Florida. These summary characteristics have been extracted from the facility printouts contained in Appendix D of the Study Area Data.

STUDY AREA

The study area for this report is the entire State of Florida including all 67 counties and is shown in Figure 1. Florida counties are diverse in terms of population, location, and economic profile. These counties consist of: highly populated, urban areas; areas with relatively low population or rural areas; coastal and non-coastal areas; relatively industrialized areas with varied manufacturing activities; and, areas that are relatively non-industrialized. In the appendices of Parts I-X of the report (County Data), each county is briefly described in terms of location, population, and economic activities occurring in the county.

SECTION 3

HAZARDOUS WASTE GENERATOR DATA AND CHARACTERISTICS OF SANITARY LANDFILLS

HAZARDOUS WASTE GENERATOR DATA

The hazardous waste generator data for the counties included in this part of the report are presented in the Appendices of this part. These data provide information on the hazardous waste generation and management practices of smaller hazardous waste generators in these counties, particularly as they relate to the use of sanitary landfills for disposal of these wastes.

The county hazardous waste data included in this report are presented in the following displays:

- Types and Amounts of Hazardous Waste Generated Annually;
- Hazardous Waste Management Practices;
- Hazardous Waste Disposed in Sanitary Landfills Annually;
- Hazardous Waste Generated by Standard Industrial Classification Code;
- Hazardous Waste Types Generated by Standard Industrial Classification Code;
- Hazardous Waste Management Methods Used by Standard Industrial Classification Code; and
- Hazardous Waste Types Generated by Standard Industrial Classification Code by Management Method.

All hazardous waste data included in the report were collected as survey data under the Florida Local Government Hazardous Waste Assessment Program. A major goal of the Florida Local Government Hazardous Waste Assessment Program is to address the problems associated with hazardous waste mismanagement, particularly as this mismanagement relates to smaller quantity generators. This program requires all counties in the State of Florida to conduct assessments of hazardous waste related activities in their jurisdictions using guidelines developed by the Florida Department of Environmental Regulation (FDER). One component of the county assessments consists of a survey of hazardous waste generators. Generators in each county were identified using a list of approximately 400 Standard Industrial Classification (SIC) codes. This SIC list was assembled initially by the EPA Office of Solid Waste for use in its national survey of small quantity generators. The EPA list was subsequently expanded to include firms that are of particular significance to the State of Florida (e.g., Boat Building and Repair), as well as to include those firms that are involved with the production or use of waste oil. Although waste oils are not regulated as a hazardous waste under the RCRA, waste oils were included in the State of Florida surveys.

The survey data were collected utilizing questionnaires sent through the mail and on-site interviews. All county data were intended to be made available to the FDER in a predetermined format so that the data could be merged into regional assessments, as well as a statewide assessment of hazardous waste generation and management practices.

All counties in the State of Florida received funding from the state to complete the surveys. The funding received by the counties was based upon population. The surveys were conducted under a variety of agreements involving county governments, regional planning agencies, private consultants, and combinations of these entities. For example, some counties conducted their own surveys while utilizing a consultant to process the data, while some of the larger counties completed all aspects of the survey in-house. The result was the collection of data through a number of individual but coordinated efforts.

The waste generation and management data consist primarily of responses from small quantity hazardous waste generators. However, some of the county data are not separated by large quantity generator data and by small quantity generator data. Overall, the portion of large quantity generator waste in these data is not significant.

CHARACTERISTICS OF SANITARY LANDFILLS IN THE STATE OF FLORIDA

This report contains information on sanitary landfills that are receiving potentially hazardous wastes. The characteristics of these sanitary landfills were obtained from the FDER. These data have been extracted from the facility permits and are maintained by the FDER in a facility data file (data file: GMS 25). Individual facility printouts for all active sanitary landfills in the State of Florida are contained in Appendix D of this part of the report (Part XI). Corresponding landfill characteristics for the 160 individual active sanitary landfills in the State of Florida are contained within the appendices of Parts I-X (County Data) of the report. The sanitary landfill information is summarized and displayed in tabular form, and is constructed from a list of twenty-one characteristics. These sanitary landfill characteristics are:

- Class of Landfill
- Responsible Authority
- Design Capacity
- Population Served
- Disposal Method
- Waste Types Accepted
- Land Owner
- Disposal Acreage
- Waste per Day Accepted
- Total Acreage
- Landfill Type
- Years in Operation
- Gas Control Used
- Cell Depth
- Depth to Water Table
- Soil Permeability
- Liner Material
- Number of Monitoring Wells
- Approved GW Monitoring Plan
- Adjacent Land Use
- Number of Surface Monitoring Points

APPENDIX A:

Sumter County

SUMTER COUNTY

Sumter County, shown in the following figure, is located in the central portion of the state. Sumter County is approximately 575 square miles in area. Sumter County is predominantly a rural county with the mining of limestone as an important, though not a labor-intensive, industry. In 1970, the population of Sumter County was 14,800 and in 1983 the population was 25,900. In 1990 the population of Sumter County is projected to increase to approximately 40,000.

The largest employment sector in Sumter County is Services, contributing about 24 percent of all jobs in the county, while Retail Trade contributes about 22 percent of all jobs in the county. The Government and Manufacturing sectors each contribute about 13 percent of total employment in the county. The Transportation, Communication, and Public Utilities and Agricultural sectors contribute 7 percent and 5 percent respectively to total employment. The remaining jobs are contributed by all other employment sectors in the county.

There is one active landfill in Sumter County called the Sumter County Central Sanitary Landfill (Class I facility). This facility began operating in 1975 and has an estimated 14 years of remaining capacity. The Sumter County facility is 30 acres in size, and is unlined. There are four groundwater monitoring wells at the facility and no surface water monitoring points. The average cell depth at the facility is 10 feet and the depth to the water table is 40 feet. Soil permeability at the site is approximately 20 inches per hour.

APPENDIX B:

Suwanee County

SUWANNEE COUNTY

Suwannee County, shown in the following figure, is located in the northcentral portion of the state. Suwannee County is approximately 685 square miles in area. Suwanne County is predominantly a rural county with some agricultural production. In 1970, the population of Suwannee County was 15,600 and in 1983 the population was 24,200. In 1990 the population of Suwannee County is projected to increase to approximately 30,000.

The largest employment sector in Suwannee County is Services, contributing about 25 percent of all jobs in the county, while Retail Trade and Manufacturing each contribute about 22 percent of all jobs in the county. The Government and Transportation, Communication, and Public Utilities sectors each contribute 8 percent to total employment. The remaining jobs are contributed by all other employment sectors in the county.

There are two active landfills in the county called the Suwannee County Central Sanitary Landfill (Class I facility) and the Branford Trash Site (Class III facility). The Suwannee County Central facility began operating in 1972 and has less than one year of remaining capacity. This facility has a clay liner and is 40 acres in size. This facility has three groundwater monitoring wells and an average cell depth of 21 feet. There are no data on the depth to the water table or soil permeability contained in the permit record for this facility.

The Branford Trash Site began operating in 1981 and has an estimated 25 years of remaining capacity. The facility is 7 acres in size and is unlined. There are no monitoring wells or surface water monitoring points at the facility. There are no data on average cell depth, depth to the water table, and soil permeability contained in the permit record for the facility.

APPENDIX C:

Taylor County

TAYLOR COUNTY

Taylor County, shown in the following figure, is located in the northcentral portion of the state along the coast of the Gulf of Mexico. Taylor County is approximately 1,050 square miles in area. Taylor County is predominantly a rural county with approximately 90 percent of its land area devoted to commercial forests. In 1970, the population of Taylor County was 13,600 and in 1983 the population was 17,400. In 1990 the population of Taylor County is projected to increase to approximately 20,000.

The largest employment sector in Taylor County is Manufacturing, contributing about 40 percent of all jobs in the county, while Services contributes about 20 percent of all jobs in the county. (Most of the jobs reported in the manufacturing sector are associated with forestry and timber production.) Retail Trade accounts for about 16 percent of total employment in Taylor County. The Construction and Government sectors represent 9 percent and 5 percent respectively of total employment. The remaining jobs are contributed by all other employment sectors in the county.

There is one active landfill in Taylor County called the Taylor County Central Landfill (Class I facility) which is publicly-owned and operated. This facility began operating in 1976 and has an estimated 9 years of remaining capacity. The Taylor County facility is 120 acres in size and is unlined. There are 5 groundwater monitoring wells and no surface water monitoring points at the facility. The average cell depth at the facility is 10 feet and the depth to the water table is reported to be 9 feet. Soil permeability at the site is 1 inch per hour. It is reported in the facility permit record that during wet periods of the year, portions of the site are submerged, and approximately 10-20 percent of the site is floodprone.

APPENDIX D:

Union County

UNION COUNTY

Union County, shown in the following figure, is located in the northcentral portion of the state. Union County is approximately 245 square miles in area. Union County is predominantly a rural county with over 80 percent of its land area devoted to commercial forests. In addition, there is truck farming, and hog and cattle production occurring in Union County. In 1970, the population of Union County was 8,100 and in 1983 the population was 10,500. In 1990 the population of Union County is projected to increase to approximately 12,500.

The largest employment sector in Union County is Government, contributing about 55 percent of all reported jobs in the county, while Manufacturing contributes about 18 percent of all jobs in the county. (Most of the jobs reported in the manufacturing sector are associated with forestry and timber production). Services represent approximately 13 percent of all jobs in Union County. The remaining jobs are contributed by all other employment sectors in the county.

There is one active landfill in Union County called the Central Union Landfill which is privately-owned and publicly-operated. This facility began operating in 1981 and has an estimated 14 years of remaining capacity. The facility is 25 acres in size and has a clay liner. There are 3 groundwater monitoring wells and 1 surface water monitoring point at the facility. The average cell depth at the facility is 5 feet and the depth to the water table is reported to be approximately 4 feet. (A comment in the permit record indicates that the depth to the water table is less than 3 feet over most of the site.) Soil permeability at the site is approximately 1 inch per hour.

APPENDIX E:

Volusia County

VOLUSIA COUNTY

Volusia County, shown in the following figure, is located in the northeastern portion of Florida along the Atlantic coast. Tourism is the major economic activity in the county, attributable to the presence of Daytona Beach, Ormond Beach, and New Smyrna Beach. However, recent industrial development has brought new manufacturing operations to the county. The area of Volusia County is 1,207 square miles. The 1970 population of the county was 169,487, and in 1980, the county population had risen to 258,762. In 1983, the county population was 284,593, and in 1990, it is estimated to be 353,500.

The three main employment sectors in Volusia County are Services (36%), Retail Trade (26%), and Manufacturing (11%). All other employment sectors contributed 6 percent or less to total employment in the county.

There are six active landfills in Volusia County: three Class I facilities (Plymouth Road Landfill, Tomaka Landfill, and Lake Marie Landfill); one Class II facility (Oak Hill Landfill); and two Class III facilities (Ormond Beach Landfill and the Linkovich Landfill). The Plymouth Road Landfill has a natural clay liner, and the Tomaka Landfill has a synthetic liner, while the other four facilities do not have liners. Groundwater monitoring plans have been approved for the Plymouth Road Landfill, the Tomaka Landfill, the Ormond Beach Landfill, and the Linkovich Landfill. The Plymouth Road Landfill, Oak Hill Landfill, Lake Marie Landfill, and Linkovich Landfill use the trench method of landfilling. The area and highrise methods are used at the Tomaka Landfill, and the area and wetland methods are used at the Ormond Beach Landfill. In 1981, the Oak Hill Landfill, Ormond Beach Landfill, and Lake Marie Landfill were listed as open dumps.

APPENDIX F:

Wakulla County

WAKULLA COUNTY

Wakulla County, shown in the following figure, is located in the northcentral portion of the state along the coast of the Gulf of Mexico. Wakulla County is approximately 635 square miles in area. Wakulla County is predominantly a rural county. In 1970, the population of Wakulla County was 6,300 and in 1983 the population was 11,300. In 1990 the population of Wakulla County is projected to increase to approximately 18,000.

The largest employment sector in Wakulla County is Manufacturing, contributing about 33 percent of all jobs in the county, while Services contributes about 31 percent of all jobs in the county. The Retail Trade and Government sectors represent 13 percent and 9 percent respectively of total employment. The remaining jobs are contributed by all other employment sectors in the county.

There is one active landfill in Wakulla County called the Lower Bridge Sanitary Landfill (Class I facility) which is privately-owned and publicly-operated. This facility began operating in 1984 and has an estimated 4 years of remaining capacity. This facility is 20 acres in size and has a clay liner. There are 6 groundwater monitoring wells and no surface water monitoring points at the facility. The average cell depth at the facility is reported to be 10 feet in the comment section of the facility permit record, and the depth to the water table is approximately 13 feet. There are no data on soil permeability at the site contained in the permit record for this facility.

APPENDIX G:

Walton County

WALTON COUNTY

Walton County, shown in the following figure, is located in the western half of the Florida Panhandle. It is a rural county, 1,066 square miles in area. The 1970 population was 16,087; the 1983 population was 22,748; and the projected 1990 population is expected to reach 27,300, representing a 20 percent increase over the 1983 population. The largest incorporated town in Walton County is DeFuniak Springs, with a 1983 population of 5,543 residents.

Total employment for Walton County is 4,171. The largest employment sector is Services, representing 33 percent of the total employed. The Manufacturing and Retail Trade sectors also contribute significantly to the total at 21 percent and 19 percent respectively. Government employment accounts for 9 percent of the total. The remaining employment sectors, including Construction; Finance, Insurance, and Real Estate; Agriculture; Transportation, Communication, and Public Utilities; and Wholesale Trade, each represent less than 6 percent of total employment.

There are two active landfills in Walton County: the Walton County Central Sanitary Landfill, a Class II site; and the Environmental Waste System Incorporated Sanitary Landfill, a Class III site. Neither of these landfills has an approved groundwater monitoring plan. According to a Northwest Florida Water Management District study, there is a surface flow from the Walton County Central Landfill south and southeast to Sandy Creek and north and northeast to Mill Andrews Creek. Little information was available concerning the Environmental Waste System Incorporated Landfill.

APPENDIX H:

Washington County

WASHINGTON COUNTY

Washington County, shown in the following figure, is a rural county located in the Florida Panhandle. In 1970, the population was 11,453 and the 1983 population was 14,889. The Projected 1990 population of 16,400 is expected to represent a comparatively low growth rate of 10 percent over the 1983 population. Chipley is the largest incorporated city in the county with a 1983 population of 3,414.

Total employment in Washington County is 3,009. Forty percent of the total is employed in the Services sector. Retail Trade contributes 13 percent, Government employment 12 percent, and Construction 11 percent of the total. Also contributing to the total figure are the Transportation, Communication, and Public Utilities sector (9%) and Manufacturing (8%). All other employment sectors, including Finance, Insurance, and Real Estate; Agriculture; and Wholesale Trade, each account for less than 5 percent of the total employment.

There are two active landfills in Washington County: the 131-acre Mud Hill Sanitary Landfill, a Class I site; and the 70-acre Chipley Landfill, a Class II site. At the Mud Hill Landfill there is a natural clay liner and the trench method is used. The site does not have an approved groundwater monitoring plan. Little information is available about the Chipley Landfill. However, a Northwest Florida Water Management District study reports that there is lateral movement of groundwater and that the clay soils are ineffective as a liner. High levels of Fe, Pb, Cd, and Cu have been found in monitoring samples form this site. There is groundwater flow from the Mud Hill Landfill south to southwest toward a seasonal stream.
